Introduction to Statistics: The Nonparametric Way (Springer Texts in Statistics)

Gottfried E. Noether

Introduction to Statistics: The Nonparametric Way (Springer Texts in Statistics) Gottfried E. Noether The introductory statistics course presents serious pedagogical problems to the instructor. For the great majority of students, the course represents the only formal contact with statistical thinking that he or she will have in college. Students come from many different fields of study, and a large number suffer from math anxiety. Thus, an instructor who is willing to settle for some limited objectives will have a much better chance of success than an instructor who aims for a broad exposure to statistics. Many statisticians agree that the primary objective of the introductory statistics course is to introduce students to variability and uncertainty and how to cope with them when drawing inferences from observed data. Addi tionally, the introductory COurse should enable students to handle a limited number of useful statistical techniques. The present text, which is the successor to the author's Introduction to Statistics: A Nonparametric Approach (Houghton Mifflin Company, Boston, 1976), tries to meet these objectives by introducing the student to the ba sic ideas of estimation and hypothesis testing early in the course after a rather brief introduction to data organization and some simple ideas about probability. Estimation and hypothesis testing are discussed in terms of the two-sample problem, which is both conceptually simpler and more realistic than the one-sample problem that customarily serves as the basis for the discussion of statistical inference.

From reader reviews:

Jeffrey Thompson:

Book is actually written, printed, or created for everything. You can know everything you want by a e-book. Book has a different type. To be sure that book is important thing to bring us around the world. Beside that you can your reading skill was fluently. A e-book Introduction to Statistics: The Nonparametric Way (Springer Texts in Statistics) will make you to always be smarter. You can feel a lot more confidence if you can know about anything. But some of you think in which open or reading a book make you bored. It is far from make you fun. Why they are often thought like that? Have you searching for best book or appropriate book with you?

Edward Brown:

The experience that you get from Introduction to Statistics: The Nonparametric Way (Springer Texts in Statistics) is a more deep you looking the information that hide inside words the more you get considering reading it. It does not mean that this book is hard to be aware of but Introduction to Statistics: The Nonparametric Way (Springer Texts in Statistics) giving you thrill feeling of reading. The copy writer conveys their point in specific way that can be understood through anyone who read the item because the author of this e-book is well-known enough. This specific book also makes your own personal vocabulary increase well. That makes it easy to understand then can go with you, both in printed or e-book style are available. We recommend you for having that Introduction to Statistics: The Nonparametric Way (Springer Texts in Statistics) instantly.

Maria Kim:

You may spend your free time to learn this book this guide. This Introduction to Statistics: The Nonparametric Way (Springer Texts in Statistics) is simple to deliver you can read it in the recreation area, in the beach, train along with soon. If you did not have much space to bring the printed book, you can buy the particular e-book. It is make you quicker to read it. You can save the actual book in your smart phone. Therefore there are a lot of benefits that you will get when one buys this book.

Barbra Walker:

Reading a e-book make you to get more knowledge from this. You can take knowledge and information originating from a book. Book is created or printed or illustrated from each source that will filled update of news. In this particular modern era like now, many ways to get information are available for you. From media social like newspaper, magazines, science book, encyclopedia, reference book, book and comic. You can add your understanding by that book. Do you want to spend your spare time to spread out your book? Or just seeking the Introduction to Statistics: The Nonparametric Way (Springer Texts in Statistics) when you essential it?
