Introduction to Applied Mathematics (Texts in Applied Mathematics) Lawrence Sirovich
From the Preface: "The material in this book is based on notes for a course which I gave several times at Brown University. The target of the course was juniors and seniors majoring in applied mathematics, engineering and other sciences. My basic goal in the course was to teach standard methods, or what I regard as a basic "bag of tricks". In my opinion the material contained here, for the most part, does not depart widely from traditional subject matter. One such departure is the discussion of discrete linear systems. Besides being interesting in its own right, this topic is included because the treatment of such systems leads naturally to the use of discrete Fourier series, discrete Fourier transforms, and their extension, the Z-transform. On making the transition to continuous systems we derive their continuous analogues, viz., Fourier series, Fourier transforms, Fourier integrals and Laplace transforms. A main advantage to the approach taken is that a wide variety of techniques are seen to result from one or two very simple but central ideas. Above all, this course is intended as being one which gives the student a "can-do" frame of mind about mathematics. Students should be given confidence in using mathematics and not be made fearful of it. I have, therefore, forgone the theorem-proof format for a more informal style. Finally, a concerted effort was made to present an assortment of examples from diverse applications with the hope of attracting the interest of the student, and an equally dedicated effort was made to be kind to the reader."

From reader reviews:

Christopher Larsen:

Have you spare time for the day? What do you do when you have much more or little spare time? That's why, you can choose the suitable activity with regard to spend your time. Any person spent their own spare time to take a move, shopping, or went to typically the Mall. How about open or maybe read a book called Introduction to Applied Mathematics (Texts in Applied Mathematics)? Maybe it is to be best activity for you. You realize beside you can spend your time along with your favorite's book, you can smarter than before. Do you agree with their opinion or you have various other opinion?

Elizabeth Pipkin:

People live in this new day time of lifestyle always try and and must have the time or they will get great deal of stress from both everyday life and work. So , when we ask do people have extra time, we will say absolutely sure. People is human not a robot. Then we question again, what kind of activity do you have when the spare time coming to a person of course your answer will certainly unlimited right. Then do you ever try this one, reading ebooks. It can be your alternative throughout spending your spare time, the actual book you have read is usually Introduction to Applied Mathematics (Texts in Applied Mathematics).

Alma Brady:

Do you have something that you prefer such as book? The guide lovers usually prefer to decide on book like comic, small story and the biggest an example may be novel. Now, why not hoping Introduction to Applied Mathematics (Texts in Applied Mathematics) that give your entertainment preference will be satisfied through reading this book. Reading addiction all over the world can be said as the opportunity for people to know world far better then how they react in the direction of the world. It can't be mentioned constantly that reading practice only for the geeky individual but for all of you who wants to end up being success person. So , for all you who want to start examining as your good habit, you can pick Introduction to Applied Mathematics (Texts in Applied Mathematics) become your own starter.

Walter Feuerstein:

Reading a book being new life style in this year; every people loves to learn a book. When you study a book you can get a large amount of benefit. When you read books, you can improve your knowledge, due to the fact book has a lot of information upon it. The information that you will get depend on what kinds of book that you have read. If you need to get information about your research, you can read education books, but if you act like you want to entertain yourself read a fiction books, this kind of us novel, comics, and soon. The Introduction to Applied Mathematics (Texts in Applied Mathematics) will give you a new experience in looking at a book.
