Cognitive Neurology: A clinical textbook

Cognitive Neurology: A clinical textbook

The study of patients affected by disorders of the central nervous system is one of the crucial research methods for investigating the organization of cognitive functions in the brain. However, many clinicians remain unaware of the significant advances that have taken place in the field of cognitive neuroscience in the last decades. This book provides an introduction to the cognitive and behavioural aspects of the clinical practice of neurology. Most of the contributors to this book combine an active clinical practice with a leading role in their respective research area, and have provided concise summaries of the theoretical advances which they consider as potentially relevant for the clinical evaluation and treatment of patients. This general approach has led to a format which is different from the many textbooks of neuropsychology that have appeared in the last few years. The organization of the material follows the main issues of diagnostic evaluation, clinical presentation and management. As a consequence, the book deals not only with the classical neuropsychological syndromes associated with stroke and degenerative dementias, but also with other common clinical conditions, such as multiple sclerosis, head injury, epilepsy and psychiatric disorders, which are often neglected in neuropsychology textbooks. Cognitive Neurology will be essential for neurologists in training, who want to understand how the observations they make everyday in the clinic relate to the expanding knowledge about the organization of cognition and emotion in the human brain. It will also be of interest to psychologists and cognitive neuroscientists, speech and language clinicians and rehabilitation specialists and psychiatrists.

Stephen Hawkins:

Is it you who having spare time and then spend it whole day by simply watching television programs or just telling lies on the bed? Do you need something totally new? This Cognitive Neurology: A clinical textbook can be the answer, oh how comes? A fresh book you know. You are thus out of date, spending your spare time by reading in this brand new era is common not a nerd activity. So what these books have than the others?

Ronald Kleiman:

As a college student exactly feel bored to reading. If their teacher requested them to go to the library or to make summary for some publication, they are complained. Just tiny students that has reading's internal or real their interest. They just do what the professor want, like asked to the library. They go to generally there but nothing reading significantly. Any students feel that reading is not important, boring and also can't see colorful photos on there. Yeah, it is to be complicated. Book is very important for you. As we know that on this time, many ways to get whatever you want. Likewise word says, many ways to reach Chinese's country. Therefore this Cognitive Neurology: A clinical textbook can make you sense more interested to read.
