The salt print is the foundation of photography. William Henry Fox Talbot, known as the father of photography, discovered the salt print process in 1834. The history of Talbot is quite remarkable. His early discoveries were the foundation of numerous photographic and print processes, many still practiced today. Due to the inherent masking ability the salt print can create a greater tonal range than other photographic print processes. The challenge is to create negatives that reach this extraordinary range. The salt print offers flexibility in controlling the colour, tones and hues.
